

Overledger 2.2.21

What's new?

The release of Overledger 2.2.21 adds more functionality for the QRC-721 token and QRC-20 token APIs.

Customers can monitor smart contract events for their QRC-721 token and receive updates directly to a callback URL.

Feature #1: Subscribe to receive updates when a QRC-721 token has been approved for collection

Sandbox

API: POST <https://api.sandbox.overledger.io/v2/tokenise/tokens/subscription/qrc721/collect>

Production

API: POST <https://api.overledger.io/v2/tokenise/tokens/subscription/qrc721/collect>

Documentation

API documentation is [here >](#)

Feature #2: Subscribe to receive updates when a QRC721 token has been burned

Sandbox

API: POST <https://api.sandbox.overledger.io/v2/tokenise/tokens/subscription/qrc721/supply>
Type: Burn Tokens

Production

API: POST <https://api.overledger.io/v2/tokenise/tokens/subscription/qrc721/supply>
Type: Burn Tokens

Documentation

API documentation is [here >](#)

Improvements

None

Known issues

An incorrect error message is returned when a space is added to the end of the network value in the location object when preparing any type of transaction. This will be fixed in a future product release.
